Growth of Uninsured Deposits and What Caused It?

- Extraordinary monetary stimulus and its likely unintended consequence

- Quantitative easing (Acharya, Chauhan, Rajan and Steffen, "*Liquidity Dependence and the Waxing and Waning of Central Bank Balance Sheets*", based on presentation at Jackson Hole Economic Symposium, August 2022)

  - Not just an expansion of Fed balance-sheet but also of commercial banks
  - Flooded with uninsured deposits, backed by low-yielding reserves, search for yield
  - For a while it looks a profitable franchise, until the tail risk of runs materializes
  - As Fed starts QE all over again: "Hotel California", no exit

- *This Time Isn't Different, but It's Magnified…*
  - Our research shows that uninsured bank deposits expand each time QE is undertaken

QE: Typically, a purchase from public/non-banks

Initial Balance Sheet Conditions

FEDERAL RESERVE	
Assets	**Liabilities**
Treasury securities	Reserves held by banks Cash held by the Treasury

BANKING SECTOR	
Assets	**Liabilities**
Treasury securities Reserves at the Fed	Deposits Capital

PUBLIC	
Assets	**Liabilities**
Deposits Treasury securities	Net worth

The Fed Purchases Assets from the Public

Balance Sheet Effects

FEDERAL RESERVE	
Assets	**Liabilities**
Treasury securities +$1	Reserves held by banks +$1 Cash held by the Treasury

BANKING SECTOR	
Assets	**Liabilities**
Treasury securities Reserves at the Fed +$1	Deposits +$1 Capital

PUBLIC	
Assets	**Liabilities**
Deposits +$1 Treasury securities -$1	Net worth

Bank balance sheets expand, financed with deposits

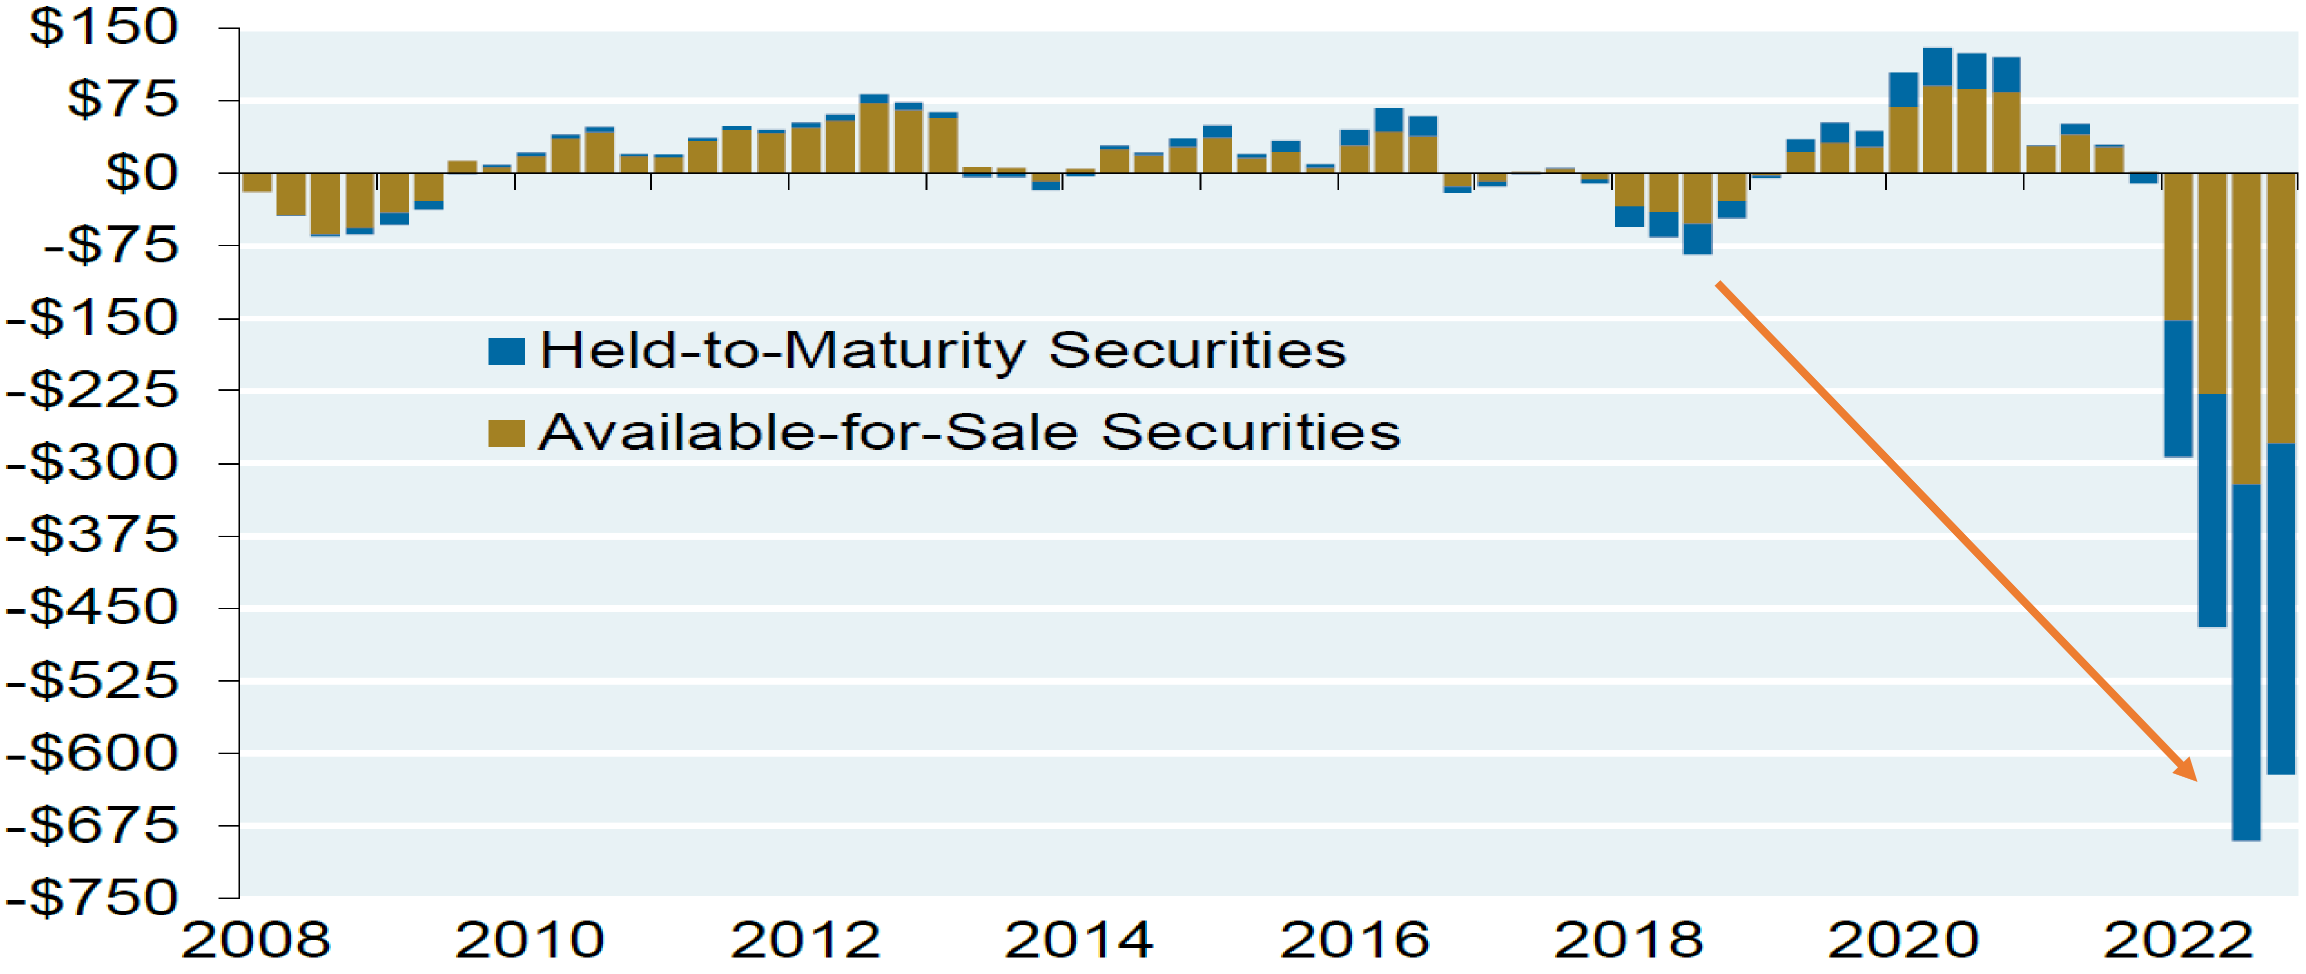
FDIC Q4 unrealized bank losses on investment securities

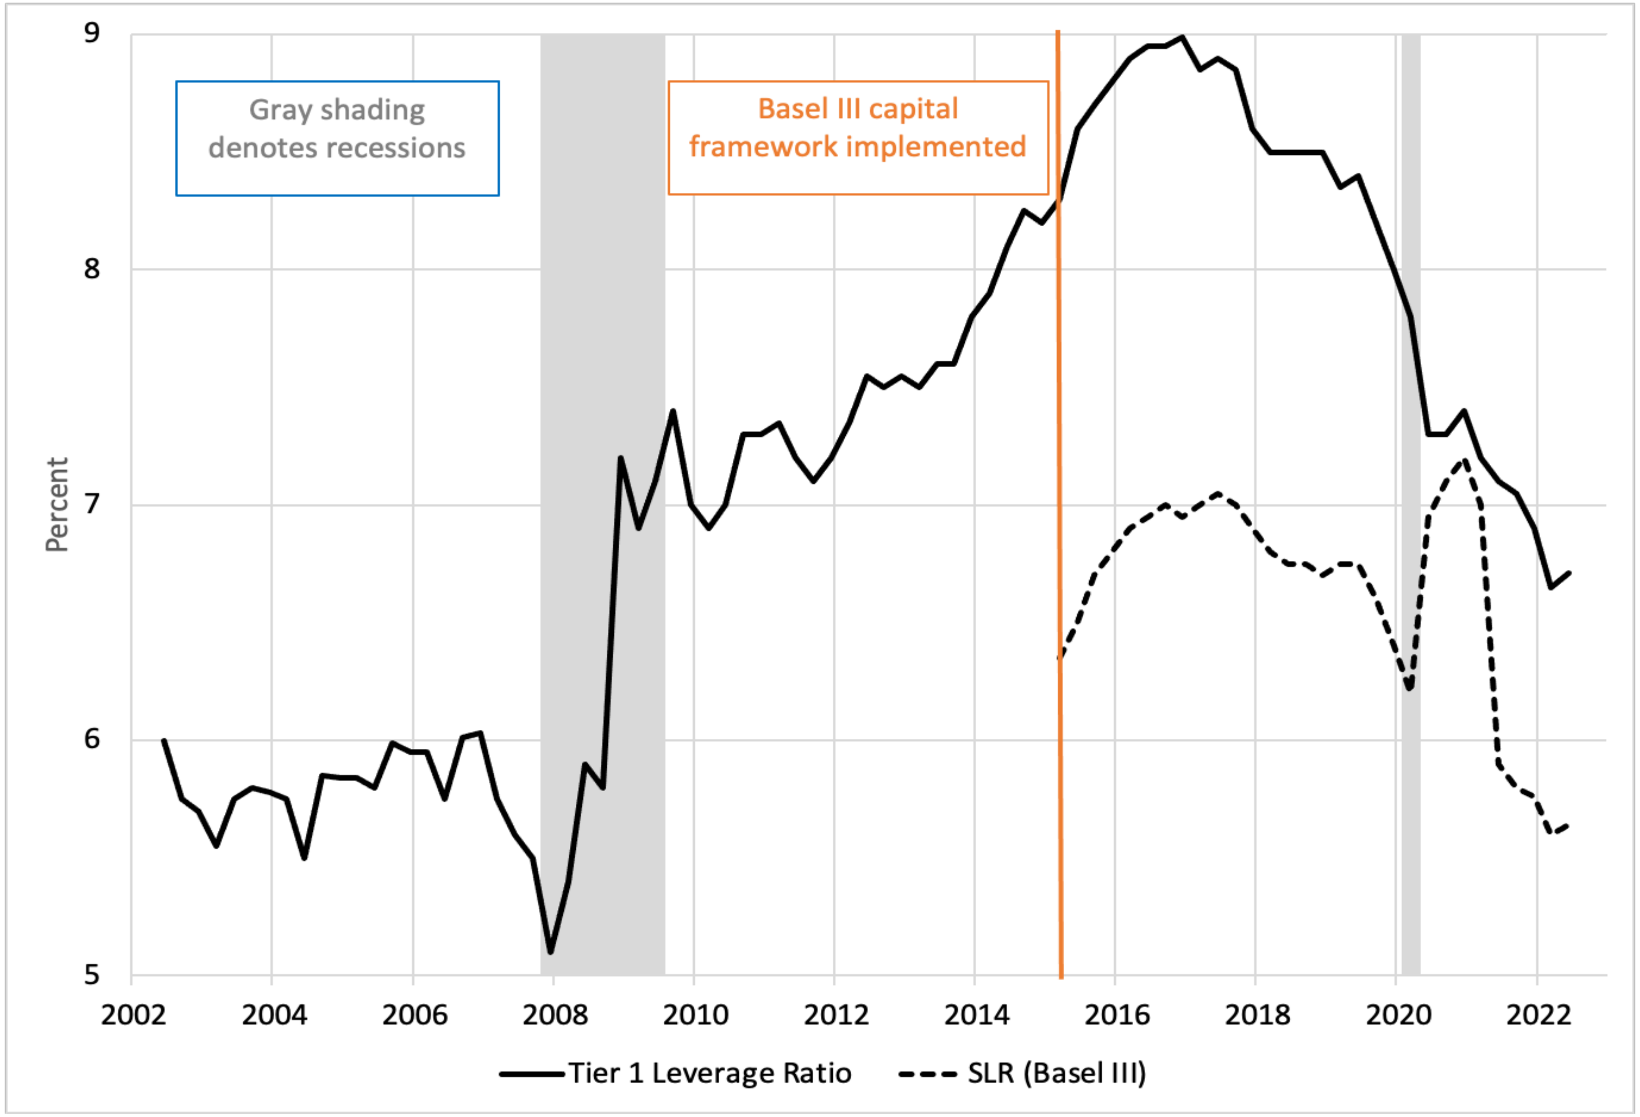
US$, billions



Source: FDIC. Q4 2022.

Total unrealized losses in this rate-hike cycle relative to the previous highlight saliently the "scale" of the bank balance sheets

G-SIB Capital Ratio: Crisis Regulatory Cycle



Crisis Regulatory Cycle

2008: Crisis triggers G-SIB recapitalization

2010: Dodd-Frank introduces annual stress tests (boosts effective capital requirements)

2017: New Admin aims to scale back Dodd-Frank rules

2018: S. 2155 relaxes regulations (especially on midsize banks)

2019: Fed eases supervision of midsize banks

2023: Midsize bank crisis

2023: New bank rules …

Note: Jun 2020-Mar 2021 SLR (Basel III) ratio bounce reflects Fed’s COVID-period definition of exposure (denominator).

So what should be done with banks now?

- Backstop it all, provide guarantees?

    - This helps stem runs, but does not restore confidence or bring down the vol, as in 2007-09
    - Another variant of risk-seeking: Remaining under-capitalized. Healthier banks may skip too
    - The social problem is to produce the “optimal” quantity of deposits, so get risks internalized

- What worked in the past can provide some guidance…

The Case for a Stagflation Stress Test

- Stress test + capital-raising, as in Feb-July 2009, for stagflation (poly-crisis)
  - Mark capital honestly in Asset Quality Review for rate hike + recession + house-price declines + decline in commercial real estate (CRE)
    - Stress it for plausible losses and cross-check with independent metrics like NYU Stern's SRISK
  - Get banks to raise capital or sell assets/franchise to more valuable banks
  - If not raise it for them via government-funded (preferred) stakes in equity
  - If done well, government funds might not be required as in 2009
- Give some formulaic concession in marking-to-market (MTM) of assets based on truly stable, insured, retail deposit base of banks
- It is best to assume remaining debts might be all due and payable
  - Diagnosis: (Fragile) Deposit franchise vs Manufacturing tail risk / Carry trades ?
  - Regardless of the diagnosis, safe to raise bank capital -> lower uninsured deposits
  - Recognize the fiscal limits on deposit insurance, guarantees, the size of Fed's put, etc.

Banks get run:
Slow at first, and then fast…

Is there a robust response?

Increase private deposit insurance

<u>Bank capital: Mark it, stress it, raise it</u>
